

AHMED YOUSEF BAKRY

Machine Learning Engineer

Cairo, Egypt | +201090319508 | ahmedyousefbakrygouda@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Machine Learning Engineer with a solid foundation in Python, statistics, and the end-to-end ML lifecycle — data preprocessing, exploratory analysis, model development, deep learning, and MLOps. Builds on strong data analytics experience (SQL, Power BI, Advanced Excel) to translate raw data into actionable insight, and is extending that foundation through hands-on training in Azure AI, MLOps tooling (MLflow, Hugging Face), NLP, and computer vision. Proven track record of delivering end-to-end analytics and modeling projects, from data collection and cleaning through visualization and business-ready reporting.

EDUCATION

Bachelor of Technology in Information Technology (Software Track)

Delta Technological University | Expected Graduation: 2027 | GPA: 3.7 / 4.0

Relevant Coursework: Data Structures & Algorithms, SQL Databases, Object-Oriented Programming (Java, C++), Web Development Basics, IoT Fundamentals

TECHNICAL SKILLS

- **Machine Learning & AI:** Machine Learning Techniques, Deep Learning, NLP with Attention Models, Computer Vision & Transfer Learning, Prompt Engineering, Feature Engineering
- **Programming & Math:** Python (Pandas, NumPy), Java, C/C++, PHP, JavaScript, Statistics & Linear Algebra
- **Data Analysis & Visualization:** EDA, Data Cleaning, Matplotlib, Seaborn, Plotly, Power BI, Advanced Excel, Geospatial Analysis (Folium)
- **Cloud & MLOps:** Azure AI Fundamentals, Azure AI Engineer Associate, MLOps, MLflow, Hugging Face
- **Databases & Data Collection:** SQL (MySQL / SQL Server), Relational Database Design, Web Scraping (Beautiful Soup), APIs
- **Tools:** Git, GitHub, Jupyter Notebook

PROFESSIONAL TRAINING

AI & Data Science — Microsoft Machine Learning Engineer Track

Applied training covering the full ML pipeline: Prompt Engineering, Math for ML (Statistics & Linear Algebra), Python for Data Science/AI/Development, Data Preprocessing & Visualization, Machine Learning Techniques, Deep Learning, NLP with Attention Models, Computer Vision & Transfer Learning, Azure AI Fundamentals, Azure AI Engineer Associate, MLOps (MLflow & Hugging Face), and a Capstone Project.

CERTIFICATIONS & LICENSES

- **Data Analysis Engineering Diploma** — MEC Academy (2026) | [View Credential](#)
- **Data Analysis for Freelancing (Python, SQL, Power BI, Data Warehousing & Freelancing Track)** — NTI (2026)
- **Statistics Foundations 1: The Basics (NASBA CPE Accredited)** — LinkedIn Learning (Aug 2025) | ID: 02b26c5c5d22cfbad8cfd8e44784113b50cdccbc2d5b5fac1646d480903f55ce | [View Credential](#)
- **Data Manipulation with pandas** — DataCamp (Jul 2025) | ID: #41,696,270 | [View Credential](#)
- **Problem Solving (Basic) Skill Certification** — HackerRank (Aug 2026) | ID: 6C6E449706FA | [View Credential](#)
- **Python (Basic) Skill Certification** — HackerRank (Jul 2025) | ID: 80810DD50DC9 | [View Credential](#)
- **GitHub Foundations (9 Hours)** — DataCamp (Jun 2026) | ID: #875,533 | [View Credential](#)
- **Introduction to Data Science (PMI Registered)** — LinkedIn Learning (Aug 2025) | ID: ec61ea62faf4f1d77b56d8d78def090fdaea323252497ef71b427fde63851ee7 | [View Credential](#)

RELEVANT PROJECTS

E-Commerce Sales Dashboard — *Power BI, SQL*

- Built an interactive Power BI dashboard analyzing 99K orders and \$15.84M in total revenue across product categories and customer locations
- Modeled and queried the data with SQL to track key KPIs, including a \$160.58 average order value, 12.09 average delivery days, and a 97% order-delivery rate (96K of 99K orders delivered)

Airbnb NYC Listings — Exploratory Data Analysis — *Python, Pandas, NumPy, Seaborn, Folium*

- Performed EDA on ~48,000 NYC Airbnb listings (2019 dataset) to identify the key factors driving listing prices
- Cleaned the data, engineered new features (e.g., a has_review flag), and used the IQR method to detect outliers (~6% of listings), applying a log transformation to normalize the right-skewed price distribution
- Found that entire home/apartment listings carry the highest median price (~\$160) and Manhattan is the priciest borough (~\$150 median), while review count showed almost no correlation with price ($r = 0.09$)
- Built an interactive Folium heatmap to visualize price intensity and listing density across the city

Global Video Games Sales — Analysis & Visualization — *Python, Pandas, NumPy, Matplotlib, Seaborn, Jupyter Notebook*

- Cleaned and preprocessed historical global video game sales data (missing values, duplicates, inconsistent entries) and engineered new features to support analysis
- Performed EDA comparing sales by platform, genre, publisher, and region to identify best-selling genres and top publishers over time
- Delivered business insights through bar charts, count plots, histograms, box plots, and correlation heatmaps

Web Scraping & Economic Analysis (GDP Project) — *Python, BeautifulSoup*

- Developed a web scraper to extract nominal GDP data for 220+ countries from online sources
- Cleaned and analyzed the dataset to compare economic performance across regions

Smart Traffic & Statistical Analysis — *Python, Pandas, Matplotlib, Seaborn*

- Cleaned traffic incident data and engineered day/hour features from timestamps to enable time-based analysis
- Analyzed accident patterns by day, location, and weather condition, and examined the relationship between traffic volume and accident frequency
- Visualized temperature-range and weather-distribution trends to surface peak-risk conditions for urban planning

EXTRACURRICULAR ACTIVITIES

- **Contributor, ECPC (Egyptian Collegiate Programming Contest), 2023, 2026:** Strengthened algorithmic thinking by solving complex problems under time pressure
- **Data Analysis Track Specialist:** Completed intensive self-led training across the Python data science ecosystem
